

RUSLAN MATUSEVICH

FRONTEND DEVELOPER

Gdańsk, Poland | +48 600 630 810 | ruslan.littlewell@gmail.com
26 May 1993 | [LinkedIn](#) | [GitHub](#)

PROFILE

Frontend Software Developer from Belarus, currently based in Poland, with 8 years of commercial experience developing web applications and websites. Strong frontend background, a solution-oriented approach, and a focus on delivering reliable user-facing features. Backend experience from pet projects using Node.js and Golang; currently expanding backend skills to strengthen full-stack development capabilities.

WORK EXPERIENCE

Senior Frontend Developer

B2B Freelance | Gdańsk, Poland | Oct 2024 - Present

Senior Frontend Developer

Techvice Sp. z o.o. | Białystok, Poland | May 2022 - Oct 2024

Frontend Developer

Techvice | Grodno, Belarus | 2018 - 2022

CORE SKILLS

Programming	JavaScript, PHP, Golang
Web	HTML, CSS, SCSS
Frontend	React, Angular, Svelte, Astro, Next.js, SolidJS
UI	Tailwind CSS, Material UI, Chakra UI, shadcn/ui, Radix, Ant Design, Styled Components
State & Data	Redux Toolkit, Zustand, Recoil, Effector, Nanostores, RxJS, TanStack Query
APIs	REST API, GraphQL, WebSocket, Server-Sent Events, OpenAPI / Swagger
Build Tools	Webpack, Vite
Architecture	SSR, SSG, SPA, Feature-Sliced Design, PWA, Monolith, Serverless, Microservices
Version Control	Git, GitLab, Bitbucket
Other Tools	TipTap, HubSpot App, Codex, Claude Code, WordPress, GramJS, Chart.js, DndKit

SELECTED PROJECTS

Baby Tracker - Mobile App for Parents

Cross-platform app for tracking a baby's sleep, feeding, and daily activity. Built activity timers and notifications, iOS Live Activities, an interactive calendar, statistics, offline-first storage, and multi-device synchronization via Supabase. Supports multiple children, shared access, and nine languages. Tech stack: React Native, Expo, TypeScript, Expo Router, Zustand, Supabase, AsyncStorage, Reanimated, Gesture Handler, EAS.

Telegram Chrome Extension (Chrome Side Panel)

Built a Chrome Manifest V3 side-panel Telegram client using React, TypeScript, Vite and GramJS/MTPROTO. Implemented QR/phone/2FA authentication, encrypted session storage with WebCrypto, live dialog updates, chat history pagination, rich media rendering, notifications, and message/file sending, editing and deletion.

VPN (with AI Agents)

Full-stack VPN platform for selling and managing WireGuard/AmneziaWG access. Built an Astro/React website, Telegram bot, admin dashboard, billing webhooks, automated VPN config provisioning, traffic accounting, subscription lifecycle management, and Docker-based deployment infrastructure. Stack: TypeScript, Node.js, Astro, React, PostgreSQL, Redis, Docker, WireGuard/AmneziaWG.

VoltmaxPL

Built a multilingual B2B landing page for Voltmax Energia using Astro, Svelte, TypeScript and Tailwind CSS. Implemented an interactive energy savings calculator, multi-step lead forms, HubSpot CRM integration with OAuth, file uploads, UTM tracking, SEO setup and Cloudflare deployment.

GalaxyBrain

Local-first React/TypeScript knowledge-base app with a custom TipTap editor, filesystem-backed JSON storage, multi-pane navigation, drag-and-drop tabs, page links, templates, computed variables, metadata aggregation, and image handling.

PROJECT EXPERIENCE

Mediatool

Enterprise web platform for TV/media operations focused on content management, playlist planning, workflow coordination, and playout control for broadcast channels. Developed and maintained a large-scale React-based media management platform used for planning, organizing, validating, and monitoring broadcast content. The system supports complex scheduling workflows, content metadata management, live playlist operations, real-time updates, role-based access, and multi-channel configuration.

Key features

- Content Manager for programs, episodes, promos, commercials, IDs, blocks, metadata, segmentation, music cues, and run logs.
- Planner with macro/micro blocks, drag-and-drop ordering, autofill/fillout tools, commercial assignment, playlist import/export, CSV/XLS downloads, and schedule synchronization.
- Workflow module for task management, timelines, labels, members, assignments, live updates, filtering, searching, and export.
- Playout module for on-air schedules, micro/macro views, dummy events, metadata, event ordering, and day-level operations.
- Playlist Checker and alerting for damaged files, on-air status, global system alerts, and operational issues.
- Live multiviewer support with HTML5/WebRTC, SLDP, MSE, and Redge backends.
- Role-based navigation and permissions for planner, playout, global, admin, and supervisor account types.
- Responsive mobile experience for dashboard, workflow, live preview, and event monitoring.
- Global and channel-level settings for system configuration, AV, FTP, metadata, email, workflow, planner, playout, and playlist checker modules.
- Real-time updates via WebSocket for planner and workflow data; authentication, recovery, user settings, profile, notifications, and two-factor related flows.

Qualified Health (Next.js, React, TypeScript, TanStack Query, Radix)

Service designed to ensure that PII (Personally Identifiable Information) and PHI (Personal Health Information) are not fed into LLMs, reducing confidentiality risks in the US. Worked on client-facing web applications, including a chat application and an admin panel for system settings and filters that prevent sensitive data from leaking to third-party services. Also contributed to backend development.

Closed Interview Platform (Web + Electron)

Secure closed communication platform for online interviews in controlled environments, built as both a web and desktop Electron solution. Developed with React + TypeScript on the frontend and Node.js on the backend, using WebRTC for real-time communication, reconnectable peer sessions and multi-peer connections. Core features include private interview rooms, video/audio, automatic reconnection, internal chat, secure file sharing, system error simulation, and donation simulation mechanics. The project required complex real-time state synchronization, peer lifecycle management, and cross-platform Electron packaging with a focus on reliability and low latency.

XLA Metaverse by Xsolla

Community-driven platform connecting prominent media universes with creators and businesses. Responsible for developing the frontend application from scratch, coordinating with the backend team, and building a system based on autogenerated content with a dynamic form builder for composing metaverse content. Collaborated with another international team delivering an additional part of the system.

EDUCATION & LANGUAGES

Web design and programming
Yanka Kupala State University of Grodno | 2013 - 2016

IT Frontend courses
IT Academy, Minsk | 2017 - 2018

Russian Native
Belarusian Advanced
Ukrainian Intermediate

English Intermediate
Polish Intermediate
German Elementary
